

NANSHAN AMERICA ADVANCED ALUMINUM TECHNOLOGIES, LLC.

EXTRUDED ALUMINUM: Rod • Bar • Tube • Pipe • Profiles

SUBJECT - Scrap Content Statement

23Sept14

Nanshan America Advanced Aluminum Technologies utilizes both post industrial and post consumer recycled scrap in the casting and extrusion of 6000 series aluminum products. The metal can range from 85% to 50% recycled content. This wide range varies based on the available scrap metal supply and alloy specifications of the final product.

All products are manufactured with a portion of the metal produced using primary aluminum purchased on the global market. No traceability information is available regarding the origin of the bauxite used in smelting the prime alloy.

All products shipped from Nanshan America Advanced Aluminum Technologies were extruded in Lafayette, Indiana. Extrusions are not imported from overseas or produced at sister Nanshan Aluminum facilities.

Best Regards,

Edward J. Vinarcik, P.E.
